

ZLIN TX

B701-01 Nomex Black / B701-19 PBI Beige

The new generation of ZLIN TX mid-calf firefighting boots is built on a timeless combination of hydrophobic leather materials and functional non-flammable textile materials commonly used in firefighting garments. This advancement puts the ZLIN series at the forefront of highly flexible, breathable, and easily closable footwear, thus completing the equipment of an emergency response unit member.

ZLIN TX B701-01
Nomex Black

ZLIN TX B701-19
PBI Beige

PRODUCT DESCRIPTION:

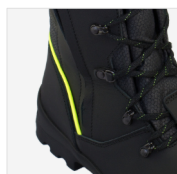

- Mid-calf firefighting boot, height D
- Combination of leather and functional non-flammable textile
- High flexibility and breathability
- Bright reflective elements
- Combination of lacing and zipper
- Padded tongue

UPPER MATERIAL:

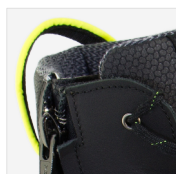

- **Cowhide leather 2,2 – 2,4 mm** with hydrophobic treatment
- **Certified** ankle protection
- **Inner cushioning** made of soft foam material ensures maximum comfort
- **Lining** - 4-layer with PU membrane

SOLE:

- **Insole** – Antiperforation inner sole made of multi-layer composite textile
- **Composite toecap** - lighter than steel toecap. High strength against mechanical damage and impact resistance
- **Explorer outsole** - guarantees high resistance to heat and cold. It is antistatic, slip-resistant, and resistant to oils (FO)
- **Cleat** - unique shape of the Explorer outsole also helps excellently with the shedding of dirt from the boot tread
- **Heel** - our "Shock Absorber" is located in the heel area to dampen impacts while walking
- **Heel Lock System** - system for locking the foot in the boot even when the fastening is not fully closed
- **TPU toecap protection** with a significant lift
- **AdaptFit Insole Technology** - system of adaptable insoles for every type of foot

ZLIN TX B701-01 Nomex Black / B701-19 PBI Beige

MAIN BENEFITS:

The boot is made of high-quality, full-grain hydrophobic leather combined with functional non-flammable textile with ceramic treatment. The model's advantage is material modularity. This consists of combining leather materials with non-flammable textiles. Textile components lighten the look of the boot, increase overall flexibility and breathability in the most exposed areas of the foot. The inner and outer ankle have certified protection. The four-layer lining with PU membrane prevents water from penetrating inside while wicking sweat out of the boot. The front lacing allows the boot to be adapted to individual needs, while the side zipper offers easy and quick putting on. The boot has several safety reflective elements, including a distinctive loop for handling the boot.

The antiperforation inner sole provides protection to the feet in the step area, while the composite toecap protects the toes from impact on the foot from above. The Explorer outsole is equipped with "Shock Absorber" technology - which absorbs impacts on the heel bone. The exceptionally smooth rolling of the toe cap and heel allows natural walking. The outsole tread is unique for its self-cleaning property, with dirt falling away during walking. The insole is removable, antistatic, and anatomically profiled. Three thicknesses of insoles are available to adjust the internal space of the boot.

CERTIFICATION:

- Tested according to standards: EN ISO 20345:2011
- Certification: EN ISO 15090:2012 F2A SRC HI₃ CI AN

EN ISO 15090:2012

SHOE FEATURES (explanatory notes):

HI ₃	Heat insulation
SRC	Slip-resistant properties
P	Puncture resistance
T	Impact resistance
A	Antistatic footwear
AN	Ankle protection
CI	Cold insulation
HRO	Resistance to contact heat
FO	Oil resistance

CARE AND STORAGE:

Treat dry and cleaned boots with a cream with hydrophobic effect. You can use a suitable waterproofing spray designed for treating membrane boots made of smooth leather. Store the boots dry, cleaned, and treated in a dry and ventilated environment.

WE RECOMMEND USING:

Holík Boot Cream

This product is designed for treating and maintaining membrane's boot in demanding climatic and working conditions. Due to the balanced ratio of hydrophobic ingredients, this cream perfectly treats, softens, and waterproofs membrane boots while maintaining the microclimate inside the boot. It covers very well and significantly revives the colour of the boot. It greases the leather and makes it water-resistant. The treatment cream comes in a practical box with a separate sponge.

Holík Waterproofing Spray

A highly effective waterproofing spray for leather and textile. The fluorocarbon-based waterproofing replenishes the water-repellent, oil-repellent, and dirt-repellent treatment while keeping the product breathable. Apply the waterproofing to a dry product in a thin layer and let it dry for at least 12 hours.
